-I- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION.
-I- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS
                                                                                                   -1- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HA1 AND HA2) LINKED BY A DISULFIDE BOND.
-1- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

This peptide fragment represents a human influenza virus haemagglutinin epitope which is used to make monoclonal antibodies with an affinity constant of 108 M·1. Such antibodies are used for detecting and isolating native human influenza virus haemagglutinin (HA), modified HA or HA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             elements encoding a gene product with a desired activity. Expression of the genetic element results, directly or indirectly in the modification of an optical property of the encoded polypeptide. The method comprises compartmentalizing the genetic elements into microcapsules, expressing them to produce their respective gene products within the microcapsules, and sorting genetic elements which produce the gene product(s) with the desired activity. The method is used for isolating genetic elements which encode a gene product with a desired activity. This can be a represents a fusion of a flag epitope and influenza haemagulutinin. It was used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes a method for isolating one or more genetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a scrambled flu-epitope peptide, and can be used in the method of the invention. The method is for screening for transdominant bloactive agents (A) abbe to alter the phenotype of a comprises: (a) introducing a library of different randomised nucleic acids (I) into cells; and (b) screening the cells for altered phenotype due to presence of (A). (A) are potential pharmaceuticals, from their effect on signalling pathways. A particular application is to identify peptides, encoded by (I), that have antitumour activity or are able to increase sensitivity to, or reduce toxicity of, known antitumour agents. More generally the method can identify agents for treatment of many other conditions, e.g. cardiovascular diseases, anglogenesis, atherosclerosis, obesity, neurodegeneration, bone disease, viral and other infections,

This invention describes novel in vitro screening methods (1) for a transdominant intracellular bloactive agent capable of altering the phenotype of a cell. (1) comprises: (a) introducing a molecular library of randomized candidate nucleic acids into several cells; and (b) screening the cells for a cell exhibiting an altered phenotype, where the altered phenotype is due to the presence of a transdominant bloactive agent. The methods are particularly useful for screening intracellular transdominant effector peptides and RNA molecules selected inside living cells from randomized pools. (1) is also useful for introducing random libraries into cells to screen for bloactive compounds. The methods allow rapid and highly efficient screening of large numbers of random cligonucleotides and their corresponding expression products in a single step. In addition, the methods allow screening in the absence of significant prior characterization of the cellular defect.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Methods for screening intracellular transdominant effector peptides and RNA molecules comprise delivering random oligonucleotides to cells, which are then screened for an altered phenotype
                                                                                                                                                                                                                                                          Intracellular transdominant bloactive agent; screening; cell phenotype; effector peptide.
                                                                                                                                                                                                                     Transdominant effector peptide associated screening peptide #49.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 67; DB 22; Length 17; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AX SX EX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This peptide comprises a Flu epitope tagged scrambled peptide.

Wurine 1071/2 Clone 8 cells were infected with pBabe puro retrovirus constructs containing a sequence coding for the Flu scrambled epitope or an inhibitor peptide (see AAW2917) identical cortambled epitope or an inhibitor peptide (see AAW2917) identical scrambled epitope or an inhibitor peptide (see AAW2917) identical to the C2 region of protein kinase C (PKA) isozymes. Control clone of colls showed predominantly cytoplasmic and periluclear staining. Those infected with constructs coding for the C2 region showed predominantly cytoplasmic and periluclear staining in both control and PWA induced cells. Novel outcomes can staining in both control and PWA induced cells. Novel outcomes can cocur upon expression of peptides in cells. A claimed method of screening for transdominant intracellular bioactive agents (A) able to alter the phenotype of a cell comprises: (a) introducing a library of different randomised nucleic acids (I) introducing a containing the cells for altered phenotype due to presence of containing the cells for altered phenotype due to presence of alfferent randomised (I); and (2) a library of ammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Screening for transdominant intracellular active agents able to alter cell phenotype - useful for examining for changed phenotype, particularly to identify potential drugs with e. g. antitumour

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a library (X) of fusion nucleic acids, each comprising a nucleic acid encoding a random peptide, a nucleic acid encoding a scaffold protein and a nucleic acid encoding a fusion partner (the nucleic acid encoding the random peptide is inserted internally into the scaffold protein nucleic acid). Also described are: (1) a library of retroviral vectors comprising (X); (2) a library of bost cells comprising (X); and (3) a method (METHI) of screening for bloactive peptides conferring a particular phenotype, comprising providing cells containing (X). The constructs may be used in the screening of peptide libraries. The use of the scaffold proteins creening of peptide libraries. The use of the scaffold proteins (specially green fluorescent protein (GFP)) in the fusion constructs increases cellular expression levels, increases conformational stability claudom peptide library members expressed in cells for the purposes of candom peptide library members expressed in cells for the purposes of detecting them. The present sequence represents a peptide which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

The present invention describes peptides which have a moderate or high affinity for each other, when added as extensions to both the N-terminus and C-terminus of a protein, can be used to help fold the protein into a compact structure. This compact structure is more stable to proteases. A composition (A) comprises at least a first dimerisation peptide (I) comprising the sequence (S1) that is no more than 8 amino acids long, where the composition optionally comprises a second dimerisation peptide (II): NH2-X1-X2-X3-X4-X5-COOH (S1) where X1 to X4 = Ala, Val, Ile, Leu, Trp, Phe, Met, or Try, and X5 = Lys, Arg, Asp or Glu; NH2-X1-X2-X3-X4-X5-COOH (II). The compositions of the invention are displayed intracellularly or extracellularly and are useful to identity binding proteins and molecules, and to modulate intracellular signalling pathways. A library of constrained proteins may be evaluated in vivo for its bloactive potential. The invention can be used to access molecules its bloactive potential. The invention be used to access molecules or tragets within living cells, and then provide for the isolation of the constrained protein which has a phenotypic effect on the living cells. The methods are also useful to identify in vitro binding partners of the constrained protein. The compositions of the invention are useful in physiological fluids. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel dimerization peptides which self-associate are used with other proteins to effect the formation of compact structures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chimeric protein; fusion protein; FLICE like inhibitor protein; FLIP; Fas; TNF; apoptosis; caspase 8; ligand; T cell; thymocyte; tumour specific antigen; immune response; therapy; prophylaxis; diagnosis; HIV; human immunodeficiency syndrome; AIDS; acquired immune deficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                    anti-apoptotic polypeptide which comprises a portion of an anti-apoptotic polypeptide which inhibits apoptosis of lymphocytes in combination with a transport group is described. The transport group is capable of transporting the chimaric group or fusion peptide across the cell membrane. The anti-apoptotic polypeptide is FLICE-like inhibitor protein (FLIP) which inhibits Fas and TWF mediated apoptosis by inhibiting binding of Caspase 8 to the Fas receptor complex, thus shutting off the downstream Fas signalling pathway. The chimaric group and fusion peptide are useful for inhibiting ligand-induced apoptosis by bringing them into contact with T cells. The chimaric group is useful for expanding T cells in vitro e.g. T cells specific for particular antigens such as tumour-specific antigen, for enhancing particular antigens such as tumour-specific antigen, for enhancing T cells e.g. activated CD4+ T cells in HIV infected patients. The chimaric group is also useful for therapeutic, prophylactic or classical propertides and macromolecules such as anti-apoptotic polypeptides and nucleic ancoding such polypeptides. Two primers (AAA54298) were cased to amplify the FLIP CDNA for subcloining into the Xhol-Nool stream for the pHA-TAT vector which contains the N-terminal protein transduction domain from the human immunodeficiency virus tat

The invention relates to a novel fusion molecule comprising at least one protein transduction domain (PTD) and at least one linked molecule has therapeutic or prophylatic activity against a medical condition. The invention also relates to methods of drug discovery in which the test compound is linked to a suitable transducing protein and introduced to a cell; a method of Killing reasonable protein and introduced to a cell; a method of Killing comprising a covalently linked fusion molecule; and a mammal adapted for experimental use in which at least one transduction molecule; a mammal compensation which at least one transduction molecule has been transduced into essentially all the cells of the mammal. The fusion molecule is used to deliver a therapeutic agent to a mammal, especially a human. The linked molecule may be a vaccine, an anti-infective drug, a cardiovascular drug, an antitumour drug, an antitumour drug, an antitumour drug, an antitumour drug or the treatment or prevention of a central or peripheral nervous system discase, Huntington's disease, and also includes pre-senile central nervous system (CNS) disorder is especially Alzheimer's disease. Parkinson's disease, Huntington's disease, and also includes pre-senile dementia, epilepsy and seizures, compulsive behaviour, meningilis.

Concluding viral and bacterial meningitis), encephalitis, ischemia, crapple (or related spongiform encephalopathies), dyslexia, age-related menning vioss or Lou Gehring's disease. Rusion molecules can also be used to kill virally infected cells, especially those infections. The methods are a highly effective means for transducing a molecule of into an entire mammal or into specific cells, tissues, organs and seizue within it. They also overcome bloavailability problems that are associated with many therapeutic agents (e.g., large molecules or are associated with many therapeutic agents (e.g., large molecules or experienced transduction of the transduction of the transgences; or the represents a protein transduction domain u
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1;
                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a chimeric fusion protein of the invention. The specification describes a chimeric pIX protein having at least one adenoviral pIX domain and a non-native amino acid sequence. The non-native sequence is a ligand that binds to a substrate present on surface cells. The chimeric proteins are used for producing adenovirus
                                                                                                                                                                                                                                                                                                                                                           Chimeric pIX protein useful in an adenovirus gene transfer vector for infecting cells comprises at least one adenoviral pIX domain and a non-native amino acid -

                                                                                                                                                                                                                                                                                                                         mating factor receptor Ste2, which was used in the development of a method to prepare cells presenting on their surface a mutant of a method to prepare cells presenting on their surface a mutant of a protein coupled receptor (GPCN) binding a desired ligand which the natural receptor cannot. The method comprises generating to replicable expression plasmids comprising a coding sequence for a GPCN mutated by one or more amino acids in its transmembrane and/or extracellular domains, and operatively linked expression control sequences, transforming host cells with the plasmids and contacting the cells with the ligand and isolating those which bind. GPCN are natural receptor proteins, i.e. membrane proteins that allow cells to detect molecules in the extracellular environment. Cells presenting mutant GPCN on their surfaces are useful as biosensors, with potential applications in diagnostics and environmental and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
Cells for surface expression of mutants of natural G-protein receptor - where the mutants can bind a ligand that the natural receptor cannot, useful as biosensors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

This sequence represents a haemagglutinin epitope. It was used in an epitope-tagged TATA-box binding protein (TBP) that is expressed by the transgents on-human animals of the invention. The animals are used to produce TBP. TBP is used to isolate and characterise higher-order transcription complexes (from different tissue and cell types, optionally at different developmental stages). It is also used to identify new and/or specific TBP associated factors (TAFs, e.g. transcription factors, activators or inhibitors) and TAF-interaction factors, and to raise antibodies against TBP. The TAFS may be useful for regulating gene antibodies against TBP. The TAFS may be useful for regulating gene antibodies are used for affinity purification of TBP and its complexes. TBP can isolate transcription complexes from a wide variety of different tissues and cells (contrast known methods that are limited to isolation complexes from a particular cell type).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TATA-box binding protein; epitope-tagged TBP; transcription complex; TAF; TBP associated factor; TAF-interaction factor; gene expression regulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
Transgenic animal expressing epitope-tagged TATA-box binding protein - for isolating higher-order transcription complexes and specific factors that associate with the protein, useful as potential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transgenic animal expressing epitope-tagged TATA-box binding protein - for isolating higher-order transcription complexes and specific factors that associate with the protein, useful as potential

transgenic non-human animals of the invention. The animals are used to transgenic non-human animals of the invention. The animals are used to produce TBP. TBP is used to isolate and characterise higher-order transcription complexes (from different tissue and cell types, optionally at different developmental stages). It is also used to identify new and/or specific TBP associated factors (TARS, e.g. transcription factors, activators or inhibitors) and TAP-interaction factors, and to raise antibodies against TBP. The TAFS may be useful for regulating gene expression, e.g. disease-related genes, so are potential pharmaceuticals, also for identifying human analogues for use in drug screening. The antibodies are used for affinity purification of TBP and its complexes. TBP can isolate transcription complexes from a wide variety of different forms and cells contrast known methods that are limited to isolation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to transgenic mice comprising a transgene under operational control of a myocyte-specific promoter. The transgene encodes a protein having wild-type CREB activity or dominant negative CREB activity. CREB is 4 3 kD basic leucine zipper transcription factor. The expression of the transgene leads to congestive heart failure (CHF). The transgenic mice are useful as genetic models of dilated cardiomyopathy or phenotypes associated with CHF. The transgenic mice are also useful for providing important basic information concerning the role of the CREB transcriptional pathway in regulating cardiac mycocyte function. These animals will also facilitate studies designed to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Transgenic mice expressing CREB, useful as genetic models for congestive heart failure, e.g. progressive biventricular failure, cardiac dilation, decreased myocardial contractility, peripheral edema or intracardiac thrombi
                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a haemagglutinin epitope. It was used in an epitope-tagged TATA-box binding protein (TBP) that is expressed by the transgenic non-human animals of the invention. The animals are used to produce TBP. TBP is used to isolate and characterise higher-order transcription complexes (from different tissue and cell types, optionally at different developmental stages). It is also used to identify new and/or specific TBP associated factors (TAFS, e.g. transcription factors, antibodies against TBP. The TAFS may be useful for regulating gene expression, e.g. disease-related genes, so are potential pharmaceuticals, also for identifying human analogues for use in drug screening. The ran isolate transcription complexes from a wide variety of different tissues and cells (contrast known methods that are limited to isolation
new drugs that can decrease the morbidity and mortality associated with the disease. The present sequence is influenza haemagglutinin (HA) peptide tag, which was used in the present invention.
                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transgenic animal expressing epitope-tagged TATA-box binding protein - for isolating higher-order transcription complexes and specific factors that associate with the protein, useful as potential therapeutic agents
                                                                                                                                                                                                                                                                                                        .;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 52,

Yasuda J., Shortridge K.F., Shimizu Y., Kida H.;
Molecular evidence for a role of domestic ducks in the introduction of avian H3 influenza viruses to pigs in southern China, where the A/Hong Kong/68 (H3N2) strain emerged.";
J. Gen. Virol. 72:2007-2010(1991).
-!- FUNCTION: HERAGGLOTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION.
-!- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HAI AND HA2) LINKED BY A DISCULFIDE BOND.
-!- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HEMAGGLUTININ HAI CHAIN.

"Evolution of the hemagglutinin of equine H3 influenza viruses.";
Virology 169:283-292(1989).
-! FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION.
-! SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HA1 AND HA2) LINKED BY A DISCLEIDE BOND.
-! SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (POTENTIAL).

Gething and DNA sequence of double-stranded copies of haemagglutinin genes from H2 and H3 strains elucidates antigenic shift and drift in human influenza virus.";

Nature 287:301-306(1980).

-! FUNCTION: HERMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION.

-! SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HAA AND HA2) LINKED BY A DISULFIDE BOND.

-! SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.

PIR: A04051: HMIVH.

-I- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITITATING INFECTION.

-I- SUBUNIT: HOMOTIMER. BACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HAI AND HA2) LINKED BY A DISCLEIDE BOND.

-I- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VICTORY 159:109-119(1987).

-I- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION.

-I- SUBUNIT: HOWOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HAI AND HA2) LINKED BY A DISULFIDE BOND.

-I- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
